

## Torqued?

It is absolutely vital that torque tooling systems are double checked with an unbiased torque auditing tool. **Crane Electronics** from **Applifast** ensure a neutral approach, as **Crane Electronics** does not manufacture any assembly tools, only torque testing equipment.

Neglecting the verification process can result in disaster. Confirming the correct amount of torque being applied is crucial in any manufacturing process.

**Applifast's** range covers wrenches, transducers, data collectors, torque testers, and system software, meeting the requirements before, during and after the assembly operation. This enables tool capacity assessment, process capability assessment and control, and process verification.

**TORQUE AUDITING SYSTEMS FROM APPLIFAST PROVIDE A NEUTRAL PROCESS ENSURING CORRECT READING VERIFICATION UNEQUALED BY OTHERS IN THE INDUSTRY.**
