INDUSTRIAL

Perfect Fit For All Production Environments

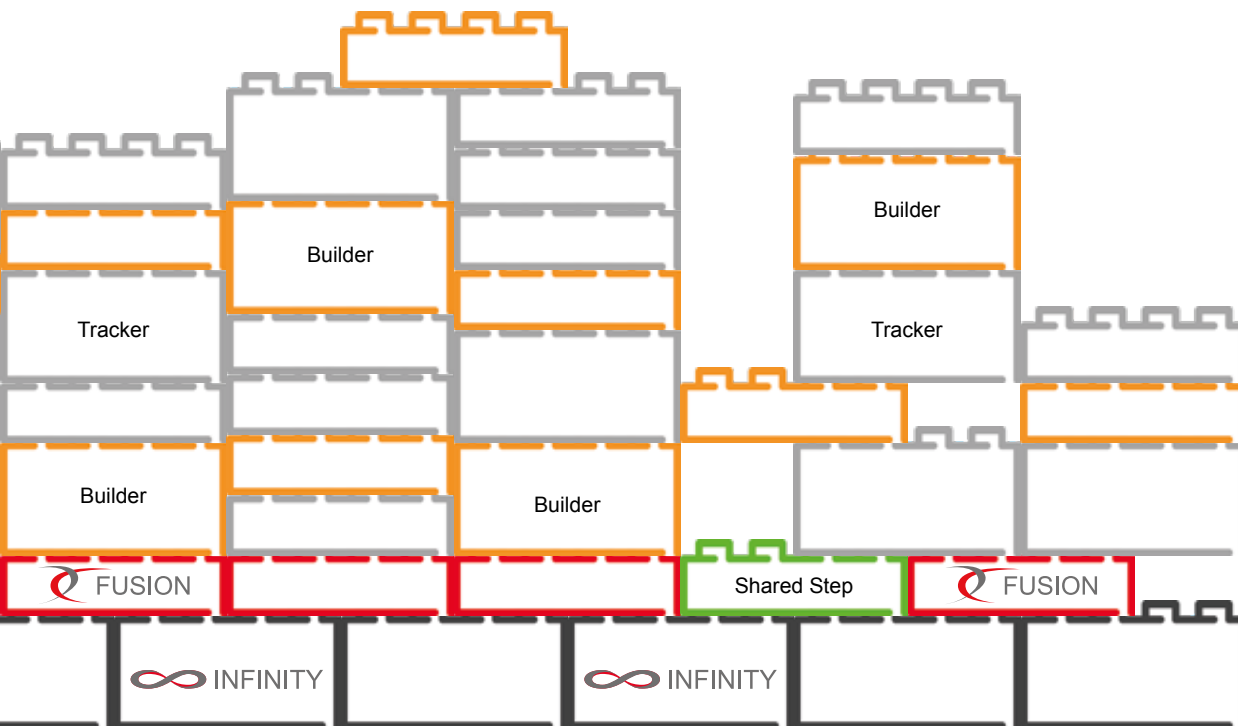

FEATURES

- Easy to use and configure, no programming skills required
- Step by step operator guidance
- Collect all process data

BENEFITS

- Allow constant continuous improvement and lean practices
- Produce only good parts
- Traceability - keep an historic record of all your produced parts

- Manage process deviations via tracking and tracing of products
- TAKT time monitoring and alert
- Connect to and control production assets and collect their data
- Data stored locally and station operates independently

- Ensure all non conformances are rectified before release
- Ensure production performing to expectation
- Standardise your approach and maximize your investment
- Produce and protect your production without any network

Process Control By Desoutter - The Per

INFINITY

Fusion Management Suite for configuring stations & processes, deployment control and remote monitoring

Production Management Module to manage products, sequencing and build requirements in each station.

Production Management Module

Structured sequence of work instructions and visual guidance delivered to operator for product variant requirements in station

Customer Line Control System

Integration with line control systems for data exchange, product in station, line running/start/stop signals and TAKT requirements

Perfect Fit For All Production Environments

Centralised storage and packaged services to manage collection and synchronisation of data

Fusion Management Suite for interrogation and analysis of production data and product histories

Concurrent Tooling option providing up to 8 tools operating in parallel on a single product in station

Quality Checking & Repair Station utilising Quality Management System modules & services

Quality Management Module

On line rework of missed items using the QMS Shared Step features

Station Level TAKT monitoring and management in line with product variant requirements in station

Process Control By Desoutter - The Per

Customer ownership

- Easy set-up of any process control requirements
- Easy modification to processes or line rebalancing requirements

Island based architecture

- Data is collected locally & stored centrally whenever possible
- Don't need network to work

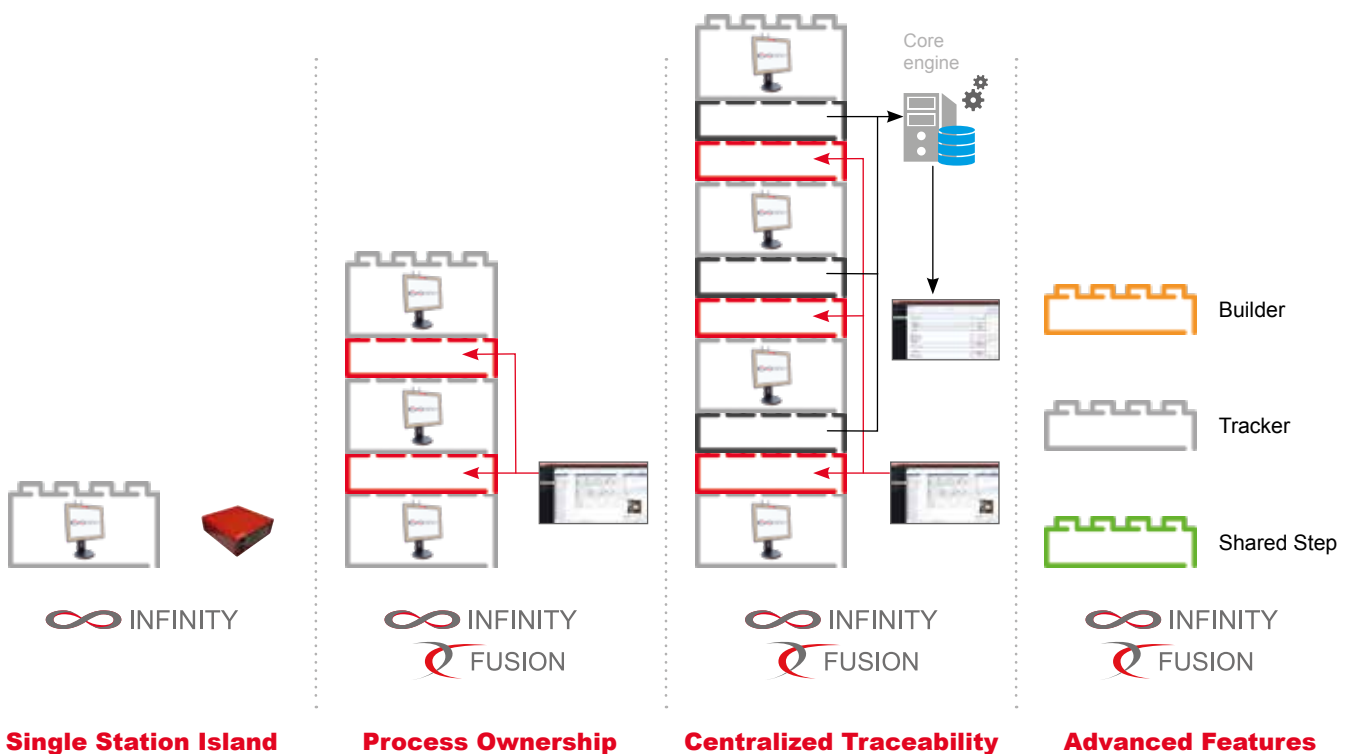

Scalable

- Easily introduce more stations/assets/steps into production
- Extended features possible through additional modules

Expandable & Scalable

Modular Approach From A Single Station to a Complete Production Facility

Perfect Fit For All Production Environments
